

RX240 EST-II (Compact Spinning Machine)

Offering the latest compact spinning technology in pursuit of the highest quality yarn

Toyota presents the RX240 EST-II, consisting of the widely accepted RX240 Series ring spinning frame equipped with Toyota's newly developed unique compact spinning system.

The RX240 EST-II offers exceptionally high quality compact yarns that exceed the capabilities of conventional ring spinning systems.

Perfect yarn quality through:

- Smooth collection of fleece fibers by suction slit and perforated apron.

- Precise slip-free rotation of perforated apron due to positive drive by bottom delivery roller

- Adjustable suction pressure controlled by inverter.

The condensing device, consisting of suction slit and perforated apron, results in smooth collection of fleece fibers. Quality yarn with low hairiness and high evenness is produced by eliminating the spinning triangle at the delivery section of the front roller
